IV3000® PORTED
Moisture responsive catheter dressing
With securing strips and documentation label

Description
IV3000 is a moisture responsive transcutaneous film dressing, specifically designed to meet the needs of catheter fixation and skin protection.

Mode of Action
IV3000 is made from a unique REACH™ film, which is highly breathable with a high permeability to water vapour, compared to other film technologies. The film protects the dressing site from external environmental contaminants as a general barrier to liquids, particulate and bacterial pathogens. IV3000 is supplied with a low-adherent, sterile medical grade securement strips and a documentation label that is also printed with this dressing.

Instructions for Use
1. Clear and dry the site for application area in accordance with normal procedures.
2. Remove the securing strips from the package (as per directions on the label) and place them around the site. The strips can be cut to size or shape using normal scissors.
3. Adhere the adhesive film on the dressing over the catheter site ensuring minimal drying.
4. Remove the transparent dressing (if the dressing and packing is not indicated)
5. Attach the dressing along the edge of the catheter
6. Apply the remaining protective dressing film around the catheter
7. Position the dressing over the catheter
8. Secure the dressing in place
9. Use the documentation label before removing from the center (1) and being placed in the patient’s notes, on the skin or on the dressing itself.10. Remove the dressing by peeling back the outer dressing first. If necessary, use an alcohol wipe to clean the dressing site. If the wire is not fully secure, remove the dressing and reapply.

Indications
The above mentioned product is suitable for securing ported catheters.

Contraindications
IV3000 should not be used on IV sites only. If an IV catheter is used, avoid open wounds such as lacerations, burns or donor sites. IV3000 should never be used on circular primary wound closure methods.

Precautions
Use a non-perfused, dry sterile dressing. Do not allow drainage, or allow drainage to spread over the dressing. Periodically monitor the dressing for any signs of escape. Use in conjunction with local, regional and systemic antibiotic protection. Information may be recorded on the documentation label before removing from the center (1) and being placed in the patient’s notes, on the skin or on the dressing itself.10. Remove the dressing by peeling back the outer dressing first. If necessary, use an alcohol wipe to clean the dressing site. If the wire is not fully secure, remove the dressing and reapply.
