

Instructions for use

Product Description

Hydrofilm plus is a sterile, self-adhesive transparent film dressing with an absorbent wound pad, made of a semi-permeable, waterproof and transparent polyurethane film coated with a polyacrylate adhesive. Hydrofilm plus is meant for human use only by both professional and lay users.

Composition

Hydrofilm plus consists of a transparent polyurethane film coated on one side with a polyacrylate adhesive. The wound pad in the middle is made of viscose fibres and covered with polyethylene mesh which acts as a non-adhering wound contact layer.

Properties

The semi-permeable polyurethane film is coated with a skin-friendly adhesive. The film facilitates the free passage of water vapour and gases, thus preventing skin maceration; it is waterproof and suitable for taking showers. The wound pad absorbs exudate and does not adhere to the wound. The rounded corners of the film dressing prevent it from rolling up, allowing reliable adhesion and longer wearing time. Hydrofilm plus conforms well to body contours and conic body parts, thus enabling freedom of movement. Hydrofilm plus can be worn for up to 5 days; medical assessment of the wound condition is, however, recommended to determine when the dressing needs to be changed.

For easy and almost painless removal, simply overstretch the material.

Intended use

Hydrofilm plus is a sterile, self-adhesive transparent wound dressing with an absorbent wound pad suitable for post-operative care of slightly exuding wounds, for protection against bacterial penetration and for use as a sterile dressing for minor injuries.

Contraindications

Hydrofilm plus must not be used on clinically infected, highly bleeding or exudative wounds or for pressure ulcers.

Side effects

Adverse reactions may occur in patients who are allergic or hypersensitive to acrylic adhesives.

Product disposal

To minimise the risk of potential infection hazards or environmental pollution, disposable components of Hydrofilm plus should follow disposal procedures according to applicable and local laws, rules, regulations and infection prevention standards.

Mode of application (see pictograms I-IV)

Clean the application area thoroughly and ensure that the skin is dry. Hairy skin areas should be shaved before applying Hydrofilm plus.

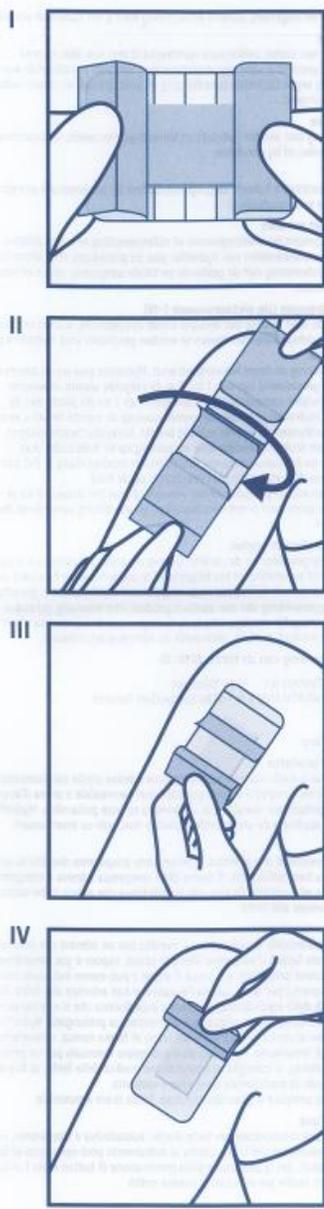

(I) Open the peel pouch and take out the dressing. Hydrofilm plus is protected by 4 covers, numbered 1 to 4 in the order of application. Slightly remove the protective covers 1 and 2, then (II) place the Hydrofilm plus adhesive side with the wound pad on the wound, making sure the wound pad overlaps the wound completely. Fully remove protective covers 1 and 2, gently press the entire film onto the skin, conforming it to the body contours. (III) Remove protective cover 3, (IV) then remove protective cover 4 and gently press Hydrofilm plus to the skin. Hydrofilm plus can be removed almost painlessly by overstretching the material. To do this, loosen an edge and carefully take off the dressing by overstretching it.

Special precautions

Notice to the user and patient: Please report any serious incident that has occurred in relation to the device to the manufacturer and the competent authority of the Member State in which the user and/or patient is established. Reusing or reprocessing a single-use medical device is dangerous as it may seriously damage the medical device's integrity and performance. Information available on request.
